CTNA Cluster Tecnologico Nazionale Aerospazio • 3° e oltre

CTNA aggregatore di ricerca ed innovazione aerospaziale

2 ore •

The **CTNA Cluster Tecnologico Nazionale Aerospazio** had the honor of participating in the 54th National Conference of Giovani Imprenditori of Confindustria, [#Rapallo25](#)

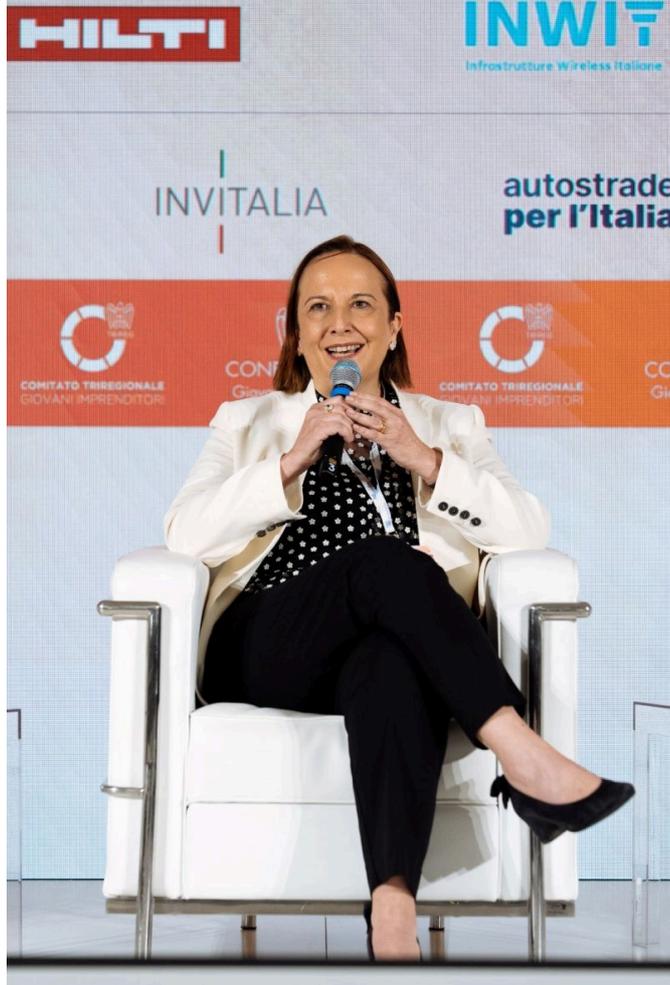

The debate saw the participation of the President of the CTNA, [Cristina Leone](#), the President and CEO of [Elemaster Group Electronic Technologies](#), [Valentina Cogliati](#) and the Executive Chairman of [RINA](#), [Ugo Salerno](#), moderated by [David Parenzo](#).

“We were thrilled to take part in this stimulating discussion aimed at bringing space closer to other business sectors. Our Country has the potential to lead the global aerospace industry. By strengthening public-private partnerships, this leadership could drive employment and economic growth.”, underlined [Cristina Leone](#).

She has revealed the many ways [#space](#) is helping humans, from supporting disaster management to aiding climate action. It is important to connect two important aspects: innovation and research in space with safety and prevention on the ground. Sustainable technological development will help to face the challenges of the future, both on Earth and in space. Furthermore, the opportunity to access microgravity can open the way to non-space companies, allowing them to experiment with new innovative materials and new drugs.

“It was a privilege to have been part of such a significant event. I would like to express my heartfelt thanks to the Giovani Imprenditori of Confindustria and to President [Maria Anghileri](#) for the kind invitation to represent the national industrial experiences in the aerospace field and the prospects for the future. Space has never been so close, and the space sector represents the future, a cutting edge of technological innovation, as well as a strategic market capable of stimulating research in numerous industrial sectors”, concluded [Cristina Leone](#)
