🌐 This Week India 📅 September 2, 2026(<https://thisweekindia.news/2026/09/02/>)

New state-of-the-art facility strengthens India's high-reliability electronics footprint while deepening strategic industrial ties between Syrma SGS and Italy's Elemaster Group.

BENGALURU, India – September 2, 2026 – Syrma SGS Technology (BSE: SYRMA | NSE: INEODYJ01015) and Italy-based Elemaster Group have officially inaugurated their joint venture's new high-reliability electronics manufacturing facility in Bengaluru, Karnataka. Operating under Syrma SGS Elemaster Private Limited, the unit marks a key expansion in high-precision design and assembly capabilities for mission-critical sectors in domestic and international markets.

Located in the Bommasandra Industrial Area, the 20,000 sq. ft. plant features advanced Surface Mount Technology (SMT), Through-Hole Technology (THT), and comprehensive box-build assembly lines. Designed to meet rigorous global engineering standards, the facility will produce critical electronic assemblies for demanding sectors including railways, transportation, industrial electronics, clean energy, and medical equipment.

The official inauguration was highlighted by the presence of Dr. Giandomenico Milano, Consul General of Italy in Bengaluru, alongside leadership teams from both parent companies, key clients, and industry stakeholders. His participation underscored the expanding industrial and technological partnership between India and Italy.

The joint venture leverages the complementary strengths of both entities: Syrma SGS brings cost-efficient manufacturing, large-scale execution, and a established Indian supply chain, while Elemaster contributes decades of European design engineering, specialized technical expertise, and long-standing relationships with global original equipment manufacturers (OEMs).

Key Executive Perspectives:

Valentina Cogliati, CEO of Elemaster S.p.a:

"We are delighted to inaugurate this facility in Bengaluru and advance our strategic alliance into its next phase. India is an increasingly vital market for Elemaster and our global customer base. By combining our engineering and high-reliability production standards with Syrma SGS's operational scale and local strength, we have established a strong platform to serve both existing and future clients."

Sandeep Tandon, Executive Chairman, Syrma SGS Technology Ltd.:

"This inauguration is an important milestone in our commitment to developing India into a globally competitive hub for high-reliability electronics. As global supply chains diversify, India has a significant opportunity to build deep capabilities where quality and precision are

non-negotiable. This partnership advances that vision while contributing to the nation's 'Make in India' objective."

Jasbir Singh Gujral, Managing Director, Syrma SGS Technology Ltd.:

"The Bommasandra facility is an essential addition to our manufacturing footprint. Bringing SMT, THT, and box-build lines under one roof creates an integrated ecosystem capable of handling highly complex product requirements across railway, industrial, and medical technology applications. We look forward to delivering increased value to our customers worldwide."

The launch event included institutional addresses, a plant presentation by Elemaster CEO Valentina Cogliati, a commemorative tree plantation, the unveiling of the facility plaque, and guided shop-floor tours demonstrating the plant's operational capabilities.

The establishment of the Bengaluru facility enhances India's position within global electronics value chains, establishing localized production capacity for high-spec engineering solutions. By combining Italian technological design with Indian manufacturing agility, Syrma SGS Elemaster aims to supply certified, high-reliability systems to critical industries globally.

About Syrma SGS Technology Ltd.

Syrma SGS is a technology-focused electronics manufacturing services (EMS) company providing integrated engineering and manufacturing solutions to global and domestic OEMs across diverse sectors.

About Elemaster Group

Headquartered in Italy, Elemaster is a global leader in Electronic Design and Manufacturing Services (EDMS), specializing in high-tech, high-reliability applications for transport, energy, medical, and industrial sectors.
