Syrma SGS and Elemaster launch high-reliability electronics facility in Bengaluru

by tele.net

03 Sep 2026 10:40 IST

Syrma SGS Technology and Italy's Elemaster Group have officially opened a new 20,000-square-foot manufacturing facility in the Bommasandra industrial area of Bengaluru, marking the first major operational hub for their 60:40 joint venture, Syрма SGS Elemaster Private Limited.

The facility is equipped to handle complex manufacturing processes including surface mount technology and through-hole technology, essential for producing high-reliability electronics. It is designed to serve mission-critical sectors such as railway, energy and medical equipment.

By partnering with Elemaster, Syрма SGS aims to bring European engineering standards to India, enabling it to compete for more complex manufacturing orders from global and domestic clients. The move is part of the company's broader strategy to shift away from simple, low-margin products towards specialised engineering services.
